The HUMAS System ecosystem

Principles, participation and tools connected around the human being. Select a component to read about its role and current scope.

The human being

Identity · experience · participation · continuity

01

Foundations

Principles and knowledge

Charter of Free Mind

The ethical foundation: human dignity, freedom of thought, responsibility, memory and human-centred intelligence.

Human Capital

Five books connect the foundations, architecture, mechanics, application and civilizational perspective of human participation.

02

Participation

Personal and organizational paths

Personal participation

A personal account, HUID, membership and applications for certification. Confirmation follows the applicable requirements and review.

Corporate participation

The organization and its participants work within assigned roles. The organization makes corporate certification decisions.

HUMAS System Mobile

Personal Glyph, messages and confirmations. Corporate mobile applications have not yet been developed.

03

Tools

Meaning, contact and understanding

HU-Translator

Provides the available context for interpreting an active Glyph. Functions described as planned remain development work.

HUMAS ID

A separate service with web accounts and personal mobile applications. Helps check a specific contact; the person decides whether to continue the conversation.

ARIA

Being developed to explain rules and connections and support conscious choice. ARIA does not make decisions for people or certify their participation.

04

Verification and records

Decisions, records and accounting

Secure Glyph Module

SGM connects a specific request, consent and human decision with a verifiable result. It complements existing authentication; the organization remains responsible for its next action.

HU-Chain

The infrastructure direction for connecting confirmed human contribution with structured records. The map does not claim that all described network integrations are deployed.

HUNIT · HUMAScoin

HUNIT records the context of confirmed participation. HUMAScoin is its rule-based calculated representation, not a market price, converted balance or guarantee of an external asset.

Memory, history and legacy

Preserve meaningful participation and pass on the context of a human life.

How to read the map

An application becomes a confirmed record only after the applicable review. For corporate certification, the decision is made by the organization.

HUMAS ID is a separate service with its own registration. HUMAS System Mobile serves personal participants; corporate mobile applications have not yet been developed.

ARIA is in development. HU-Chain describes the infrastructure direction. External exchange and liquidity are not presented here as available services.
